
PA CleanWays Illegal Dump Survey Final Report

ALLEGHENY COUNTY 2005

Empowering people to eliminate
illegal dumping and littering in Pennsylvania.

**Empowering people to eliminate
illegal dumping and littering in Pennsylvania.**

Since 1990, PA CleanWays has been dedicated to empowering people to eliminate illegal dumping and littering. Through the coordinated efforts of nearly 20,000 PA CleanWays cleanup volunteers, 7,861 tons of trash and over 77,000 tires have been removed from illegal dumpsites in Pennsylvania and properly disposed. Through special collection events sponsored by PA CleanWays chapters and affiliates, an additional 218,000 tires and 20,000 appliances have been properly disposed. These are waste materials that might otherwise have been dumped illegally. Our experience indicates that local involvement, partnerships and support are vital to lasting success in addressing illegal dumping and littering.

EXECUTIVE SUMMARY

PA CleanWays is a non-profit organization that empowers people to eliminate illegal dumping and littering in Pennsylvania through various education and environmental programs. PA CleanWays' illegal dump surveys educate state, county and local officials about the problem of illegal dumping and provide valuable data about the dumpsites and the community in which they reside to address the problem through cleanups, municipal waste collections, and recycling programs.

Illegal dumpsite identification was completed by driving roads and contacting various constituent groups such as municipal offices and community services, state agencies, and environmental and conservation groups in the area. Limitations of the survey process include poor visibility in high growth areas, and surveyors not accessing private lands, or high crime/high risk areas. Due to these limitations, it is likely that there are additional dumpsites not accounted for in this report.

Currently, PA CleanWays of Allegheny County is conducting a separate illegal dumpsite survey of the City of Pittsburgh. Therefore, for the purpose of this report the City of Pittsburgh was not included in the survey area.

There were 202 dumpsites identified, containing 344.08 tons of trash. Ninety percent of the sites were determined to be active, and 15% of the sites were located in a rural area.

In Allegheny County, of 130 municipalities, all municipalities had mandatory trash collection. Eighty-one municipalities have a curbside recycling program within their community; of those, 60 are mandated programs.

Fifty-seven percent of the surveyed sites were in the vicinity of some sort of waterway or body of water, while 24% had waste materials directly in the waterway itself. Hard-to-dispose of items were the most common waste type in the identified dumpsites.

BACKGROUND

PA CleanWays is a nonprofit organization that empowers people to eliminate illegal dumping and littering in Pennsylvania. Since 1990, PA CleanWays has helped people who are ready to take action against these destructive problems. By partnering with county and local officials, concerned residents, and community organizations, tangible results can be seen within a community through the:

- organization of illegal dump and litter cleanups,
- adoption of local areas,
- prevention of future dumping by the watchful eyes of volunteer monitors,
- placing of physical deterrents, and
- enforcement action if needed.

PA CleanWays educates the public about proper waste disposal, recycling and practical alternatives to dumping and littering through the dissemination of literature, presentations, and coordination of collection events for hard-to-dispose of items.

PURPOSE OF ILLEGAL DUMP SURVEYS

The purpose of the illegal dump survey was to assess and document as many illegal dumpsites as possible within the county. Illegal dumping mostly occurs in remote and secluded places, rural areas where few persons live and the roads are less traveled. However, for many people who are residents of an urban area, an illegal dump is within a one-mile radius of their home. Illegal dumping, within an urban context, has its own set of unique characteristics. Overall, very few people are aware of the widespread problem of illegal dumping.

The first step in developing an action plan against illegal dumping in a community is to determine the extent of the illegal dumping problem. Once sites are identified, assessed, and mapped, the data gathered can be used to:

- show that a problem does indeed exist,
- prioritize the sites and areas for cleanup and abatement,
- document problem materials within the dumpsites and develop plans for proper disposal, and
- provide a benchmark to measure cleanup progress.

The survey is also a tool that can be used for planning purposes within the community. It can provide valuable insight into development of solid waste and recycling programs. It can be used to gain support for funding for public awareness programs and education, as well as generate funds to clean the existing dumpsites.

IMPACTS OF ILLEGAL DUMPING

Illegal dumping poses a direct threat to the health and safety of humans and animals. Illegal dumping attracts disease spreading rodents and mosquitoes by giving them a place to live and breed. West Nile Virus, carried by mosquitoes, has been a primary concern for environmental officials. Illegal dumps also can be a source of physical injury for humans and animals due to broken glass, rusty metals, and toxic substances.

Recently a new threat has been added to illegal dumping. Methamphetamine labs, used to produce the illegal drug crystal meth, are becoming more and more common. The materials used to make the illegal drug are tossed along the roadsides in illegal dumps and are extremely toxic.

Environmentally, illegal dumping pollutes our soil, surface and groundwater supplies, as well as the air we breathe if a site catches on fire. The emissions released by the burning plastics and household hazardous waste can be extremely toxic. It is also aesthetically unpleasing, ruining the beauty of natural areas, including many public places such as community parks and state forests, parks and game lands.

Economically, illegal dumps are expensive to clean up. Government agencies spend millions annually on cleanup efforts. The estimated cost to clean up a site can be anywhere from \$600 to over \$1000 per ton for clean up and removal.¹

Illegal dumpsites can also impact property values and are a liability for property owners and property purchases and transfers. Tourism revenue can also be affected by illegal dumps projecting to tourists that trash is not a concern of the community or the persons living there.

Illegal dumping also has social impacts to an area. When illegal dumping in neighborhoods and communities becomes status quo, quality of life is impacted and low-level property crime often increases.² This is what is referred to as the “broken window theory” developed originally by James Q. Wilson and George Kelling. The “broken window theory” suggests that neighborhood strategies help to deter and reduce crime by the fast clean up of illegally dumped items, litter and spilled garbage, and by the prompt removal of disposed of items.³

SURVEY METHOD

Definition of an Illegal Dumpsite

One of the primary goals of an illegal dump survey is to ultimately address the trash in our communities; therefore, the following were considered illegal dumpsites and included in the survey:

- Areas of concentrated trash
- Areas of scattered trash that:
 - Are not considered roadside litter (bottles, fast food wrappers, cans, etc.)
 - Appear to have new trash thrown on them occasionally (more than twice a year)
 - Appear to have new trash thrown on them occasionally, but cleanup maintenance is prevalent to prevent accumulation

¹PA CleanWays averaged cost from multiple cleanups throughout 2004 & 2005.

² Keep America Beautiful National Conference, December 2004

³ Henry G. Cisneros, “Defensible Space: Deterring Crime and Building Community”, January 1995

- Areas containing only piles of yard waste (grass, leaves, branches, trees, etc.) These sites can often attract the dumping of other materials and can grow into major dumpsites.
- Areas containing isolated or solitary items that may or may not be dumped on in the future

For the purpose of this report, significant tire piles were not considered illegal dumpsites. The Department of Environmental Protection Southwest Region office has identified and surveyed significant tire piles. They have compiled a separate report identifying these sites throughout the county. Many of these sites contain over 10,000 tires. This information is available through DEP.

Site Identification and Assessment

PA CleanWays has learned through our experiences to effectively identify illegal dumpsites in an area, it is necessary to physically travel the roadways. By focusing on high probability areas for dump locations such as pull-offs, roads with hills, etc., efficient surveying can be done on large areas within a short amount of time.

Preliminary data gathering was conducted by sending a letter to every municipality within the county concerning the survey project. The letters detailed the survey purpose and plan and asked for known illegal dumpsites to be reported back to us. Letters were also sent to all groups that were familiar with the roadways such as the police, fire, ambulance, and maintenance crews, as well as environmental groups interested in conservation of this area, and state agencies such as the Department of Environmental Protection, Department of Conservation and Natural Resources, the Pennsylvania Game Commission, and the Pennsylvania Fish and Boat Commission. Follow up phone calls were made to each municipality prior to beginning assessments in their area.

Once an illegal dumpsite was located, characteristics about the site itself were recorded and documented on standard forms. A copy of the Illegal Dump Survey Assessment Form and Instruction Sheet are available by contacting PA CleanWays. In some cases, pictures were also taken of the illegal dumpsites to further document the problem. GPS coordinates were recorded for each site in order to produce illegal dumpsite maps within the county based on municipalities, population density and environmental features. (See Attachments 1,2,3)

Limitations

The primary limitation with road surveys is that they only yield sites visible from the public right of way, thus they were the only ones assessed by PA CleanWays. PA CleanWays did not enter private property to assess sites. It can be presumed that there are significant numbers of illegal dumpsites out of sight on private property with limited access. Because safety considerations were a priority for this project, areas were not assessed in high crime/risk areas. Most surveying began after the foliage had thinned in the fall and visibility improved, however some site assessments were limited due to high vegetation.

ALLEGHENY COUNTY ILLEGAL DUMPSITE SURVEY AREA AND RESULTS

Survey Area

Currently, PA CleanWays of Allegheny County is conducting a separate illegal dumpsite survey of the City of Pittsburgh. Therefore, for the purpose of this report the City of Pittsburgh was not included in the survey area. This information is available through PA CleanWays of Allegheny County.

Allegheny County encompasses 730.2 square miles and is located in the southwestern part of Pennsylvania. The county is bordered by Westmoreland, Washington, Beaver, and Butler counties. The county is comprised of 130 municipalities including the City of Pittsburgh. The county has two major watersheds within its boundaries, Chartiers Creek Watershed and Monongahela River Watershed.

According to the Census Bureau, the 2000 census recorded the population, less the City of Pittsburgh, to be 947,103. The median household income for all of Allegheny County is \$38,329. The per capita income for all of Allegheny County is \$22,491. Eleven percent of individuals are below poverty status, while 7.9% of families are below poverty status. Both are equal to the state average of 11% for individuals and 7.8% for families. The percent of high school graduates or higher is 86.3%, which is higher than the state average of 81.9%.

Once labeled as the “Steel Capital of the World”, Allegheny County is emerging through those smoky skies as a county with new technology, medicine, art and tourism and a bright future ahead. Earning the distinguished honor “Best City View” by Tradeshow Week, the David L. Lawrence Convention Center debuted in 2003 as the first convention center to meet green building specifications. The U.S. Green Building Council sites Allegheny County as having a region with the largest concentration of green buildings in the country.

In Pennsylvania, municipal solid waste (msw) includes municipal waste, sewage sludge, construction and demolition waste, asbestos, and ash. In Allegheny County, 130 municipalities were noted as requiring trash collection, while 81 municipalities have a curbside recycling program within their community. In 2003, according to the Department of Environmental Protection, Allegheny County reported a total of 996,781.41 tons of municipal solid waste generated. Of that total, 129,997.17 tons were recycled giving Allegheny County a 13% recycling rate. The county has a msw generation rate of .85 tons per person per year. The national average is .8 tons per person per year.

Site Characteristics

Allegheny County surveys resulted in the identification of 202 illegal dumpsites totaling more than 344.08 tons of trash. Most sites were small sites with less than 5 tons of trash. The sites ranged in size from approximately .5 tons to 20 tons of waste. A chart of Site Characteristics by Municipality can be found as Attachment 4.

Of the 202 dump sites, 15% were in rural areas, 15% in urban areas, and 70% in suburban areas. Most of the terrain of Allegheny County is relatively hilly. Sloped hillsides provide illegal dumpers with a convenient place for easy unloading.

All of the sites were determined by their contents to be either active or inactive. Of the 202 sites, 90% were considered to be a continuous problem where dumping occurs routinely. Only 13 sites (6%) had “No Dumping” signs present and 12 of those 13 sites were active. Signs, although effective in some areas, often send a message that this is a “safe” place to dump. In other county surveys, the presence of signs resulted in the identification of sites that were not visible from the road. Concerning visibility, 89% of the sites were visible or partly visible from the road. This fact lends itself to the theory that illegally dumped trash will attract more trash. An Illegal Dumpsite Characteristics Summary Chart by County can be found as Attachment 5.

Impacts on Waterways

The impacts of illegal dumping on wetlands and waterways in Allegheny County are significant. Of all the illegal dumpsites, those posing the most direct and obvious threat to the environment were those located in or near waterways. Fifty-seven percent of the surveyed sites were in the vicinity of some sort of waterway or body of water. Forty-eight of those sites had waste materials directly in the waterway itself. (See Attachment 4) It should, however, be noted that all illegal dumps contaminate our water supply.

Waste Characteristics

Allegheny County illegal dumpsites contained a variety of waste types. In some areas, the common presence of a waste type may indicate the need for a refuse/recycling program for that particular material. Although there was a variety of refuse found in the illegal dumps, the most prevalent were hard-to-dispose of materials such as tires, appliances, and other bulky waste items. Recyclables were also commonly found while surveying. Recyclables are defined as steel, bi-metallic and aluminum cans, glass, plastic bottles, newspaper, magazines, and cardboard. These were usually mixed with other materials. A chart of the Waste Characteristics by Municipality can be found as Attachment 6.

POSSIBLE CAUSES AND SOLUTIONS

Illegal dumping occurs in every county of the state. There are a multitude of reasons and excuses why people dump: the cost or inconvenience of proper disposal; the lack of, or frustration in finding proper disposal options; lack of public education; profit making; the result of other criminal activity or malicious mischief.

Possible Causes

- Municipal curbside trash collection is unavailable.
Because it is not mandated by the state, trash collection options are dependent on the city or municipal government. Communities that depend on private subscription for waste collection services have reported greater dumping problems. Inherent inefficiencies and associated higher costs exist in almost all private subscription systems because trucks must travel long distances between customers.⁴
- Recycling programs are unavailable or inconvenient.

⁴ PA CleanWays and PROP, “Factors Influencing Illegal Dumping in Pennsylvania Communities”, Spring 2001

Act 101 dictates that all communities over 10,000 and densely populated municipalities between 5,000 and 10,000 have recycling programs. Curbside recycling communities have reported a lower incidence of residential waste accumulation problems and a slightly lower incidence of dumping problems.⁵

- **Disposal of Construction and Demolition Debris (C&D)**
C&D debris is a serious solid waste management issue because of the amount that is generated each year. C&D debris is often found in illegal dumps and creates a compounded problem in that some of the materials may be hazardous, such as wood chemically treated or painted with lead based paint, asbestos containing insulation or shingles.
- **Shortage of Enforcement**
Unfortunately, many communities cannot devote people and resources to effectively deal with illegal dumping. As a result, dumpers do not fear prosecution, thus have no reason to stop their habits.
- **Education**
Many people have been dumping all their lives and don't see it as a problem, nor do they see the harm in it. Not long ago, everyone trashed the environment, using open town dumps, burning or burying trash, or dumping it out of sight. It was an acceptable practice. Today we know the harmful effects, but a few people still refuse to change or believe their "little bit of trash" won't hurt.
- **Minimal Funding Opportunities**
Funds are needed to organize cleanups, educate the public, enforce regulations, and other associated project costs. Because of limited funding for clean-ups and abatement activities, these kind of events can be difficult to coordinate.

Possible Solutions

- **Organize a cleanup**
Cleanups are an effective way to combat littering and illegal dumping. Cleanups help to build ownership, restore community pride and send a message that dumping will no longer be tolerated.
- **Organize a special collection event**
Special one-day collection events are worthwhile. These special collection opportunities are very effective when routinely offered, such as each spring or fall as a community cleanup day, but are also successful when offered as community resources permit. These special collections commonly target hard-to-dispose of materials such as tires, appliances, scrap metal, computers, electronics, and household hazardous waste. Most of these items account for what is found in illegal dumps.

⁵ PA CleanWays and PROP, "Factors Influencing Illegal Dumping in Pennsylvania Communities", Spring 2001

- **Physical Deterrents**
The placing of guard rails or mounds of dirt at pull-off areas, as well as the planting of trees can help provide a barrier that will limit accessibility to a site for future dumping.
- **Site monitoring and maintenance**
It is important to monitor a site after an area has been cleaned in order to watch for subsequent dumping or littering, keep the site clean, and to report any incriminating evidence to the proper enforcement agency. Keeping the site clean makes it easier to spot new trash and discourages subsequent dumping, since trash attracts trash.

Enforcement, with monitor support, effectively decreases the incidents of dumping and littering. When word gets out that dumping activity will not be tolerated and violators will be caught and prosecuted, dumping decreases.
- **Community education**
Intentional illegal dumping and littering are social problems that require a shift in attitudes and practices. Education is the key to changing values, habits, and attitudes. Education programs should be tailored to inform the community and can take many forms such as: school/community presentations, press releases, radio and newspaper ads, and publications.
- **Enforcement of existing laws**
Any improper disposal of trash is illegal and violators can be prosecuted. Numerous Pennsylvania agencies enforce laws addressing improper disposal of trash. The Pennsylvania General Assembly created and enacted our littering and dumping laws.⁶ County and municipal governments create and enact ordinances that are specific within their local boundaries.

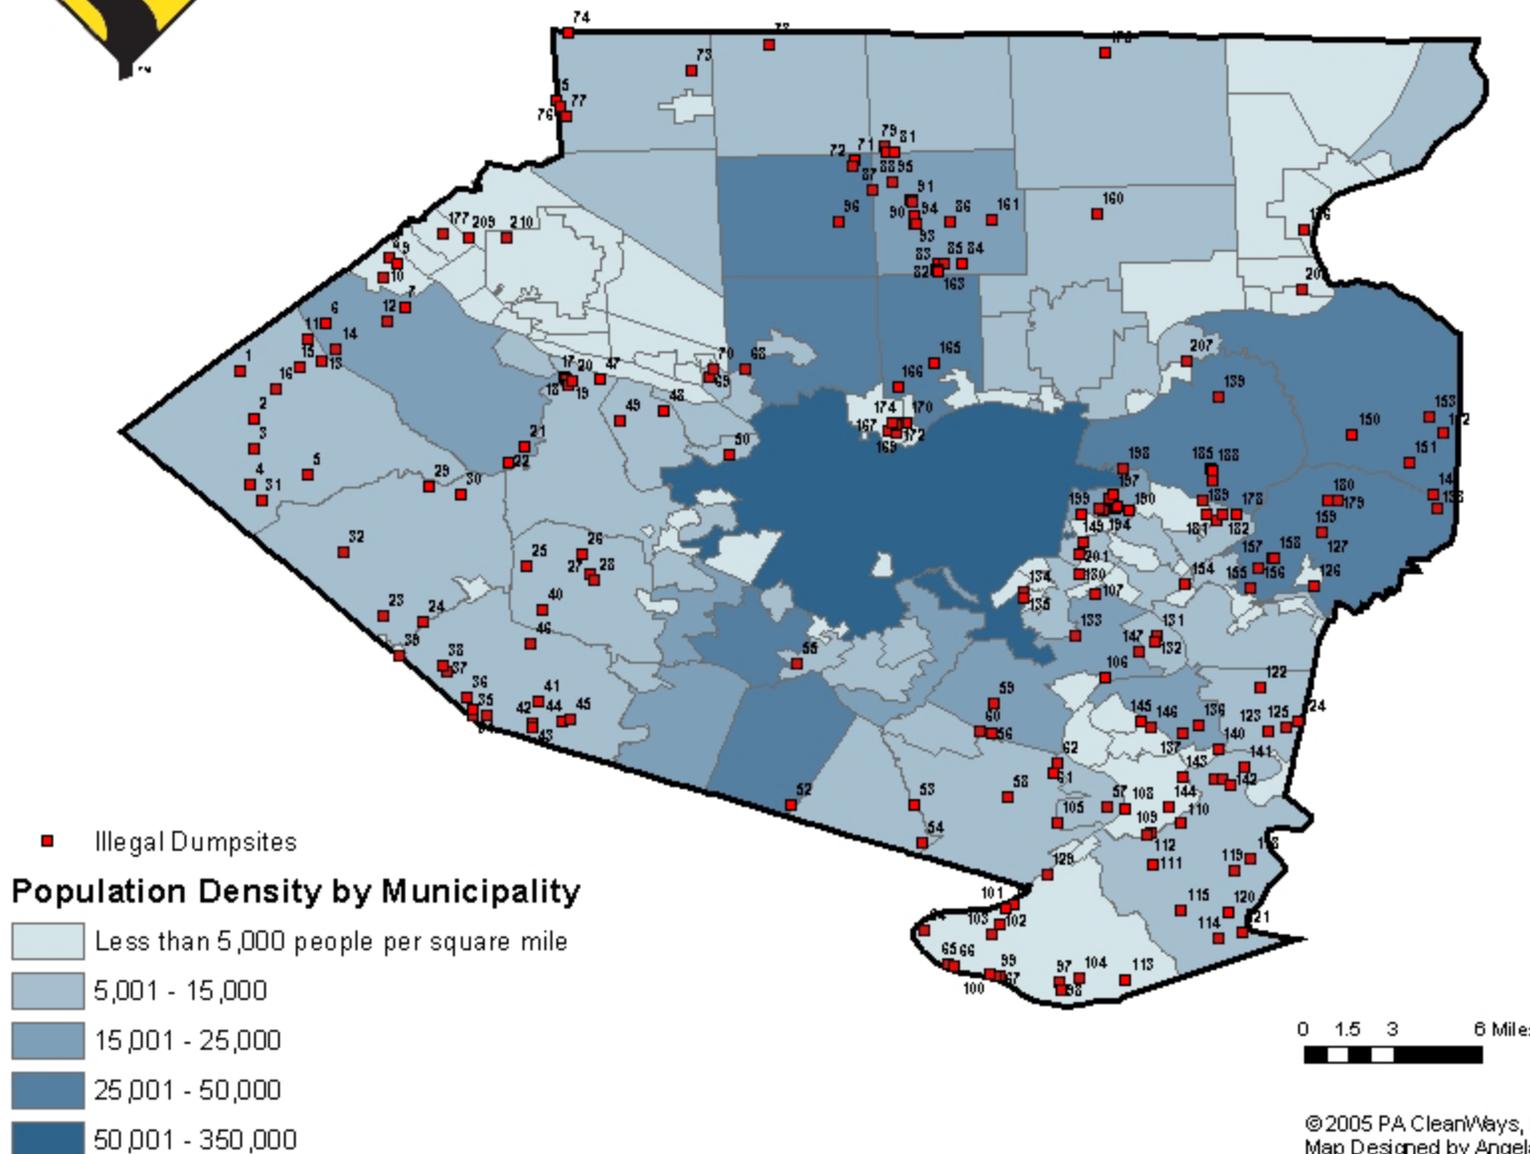

SUMMARY

This survey accounted for 202 illegal dump sites in Allegheny County consisting of 344.08 tons of trash. This is not a comprehensive survey of the entire county as it is expected that there are many more illegal dumpsites on private lands, as well as ones on public lands that have gone undetected. The City of Pittsburgh was omitted from the survey area as a separate illegal dump survey is currently being conducted in the City of Pittsburgh. However, the documentation and assessment of these 202 sites in Allegheny County are a strong step forward in the fight against illegal dumping in Pennsylvania. By providing the needed data to address the problem of illegal dumping, constituents can begin addressing the problem through public policy, resource allocation, community education and cleanups.
